DETAILED ACTION

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on February 3, 2006 has been entered.

2. The terminal disclaimer filed on January 6, 2006 disclaiming the terminal portion of any patent granted on this application which would extend beyond the expiration date of US Patent Number 6,814,347 has been reviewed and is accepted. The terminal disclaimer has been recorded.

Allowable Subject Matter

3. Claims 1, 3-5, 7, 10, 12-14, 16, 19, 21-23, 25 and 28-29 are allowed.

4. The following is an examiner's statement of reasons for allowance: the prior art of record fails to anticipate or render obvious a suspension system for a vehicle comprising a first compressed gas disposed in a first working chamber, a second compressed gas disposed in a second working chamber, wherein a booster enables a gas pressure communication between the first pressurized working chamber and the second pressurized working chamber. Desvigne (EP 0 800 939) and Ekdahl (WO 91/05180) each teach a suspension system having two pressurized gas working chambers communication with each other. However, each system fails to anticipate or render obvious the use of a booster between the two working chambers. Axthammer fails to anticipate or render obvious the use of a gas in the first pressurized working chamber.
